NOVELL INC.
PROVO, UTAH, USA

Installing a state-of-the-art Access Control and Closed Circuit Television System for one of the world's largest and most successful networking companies required a great deal of coordination on several continents.

Utah-Yamas Controls has installed and serviced over \$ 3,000,000.00 worth of security equipment and upgrades for Provo, Utah based Novell. A leading provider of networking solutions.

At their new integrated control center, Novell security personnel closely survey over 2,000 card readers, 5,000 alarm points and 23,000 users on 4 continents. Each access control panel remotely communicates over a secure Novell network, through the world-wide web.

Novell's Utah campus is comprised of many buildings and includes over 1,000,000 square feet. Each of the buildings on campus is connected with a secure and redundant fiber optic network.

The Access Control is fully integrated with a Pelco 9760 full matrix Video Surveillance System with more than 130 high-resolution color cameras. A bank of Digital Video Recorders record all activity 24-hours a day 365 days a year for instant access to archived events.

Most of the work at Novell took place in occupied areas. Utah-Yamas Controls worked very closely with building management so that employee's productivity was not affected.
